

1. I, Sanjana Akter Roshni, reside in Dhaka, Bangladesh, with my husband, who is employed as a Software Engineer. My father owns and manages Sydney Homes Ltd, a real estate company specializing in residential apartment construction and sales. I am not currently involved in any community or NGO leadership roles.

My primary sponsor is my father, with fixed deposit of BDT 50,00,000 (approximately AUD 57,145). My secondary sponsor is my mother-in-law, with fixed deposit of BDT 40,00,000 (approximately AUD 45,716), making a combined total of BDT 90,00,000 (approximately AUD 102,861). My father's annual income is approximately BDT 35,50,000. He owns a real estate company and land valued at approximately AUD 123,609 while my mother-in-law owns property worth approximately AUD 427,014. I have been working as a Programmer at Computer Ease Limited since 12 May 2024, earning BDT 41,600 monthly. I have no study gaps and no military obligations.

2. In selecting a postgraduate destination, I compared the UK, Canada, and Australia. The UK involves comparatively higher tuition and living expenses, while Canada is currently facing tighter study permit policies and increased visa uncertainty. Australia offers a more stable student visa framework, strong post-study work opportunities, and internationally recognized IT education.

Among universities in Perth, The University of Western Australia stands out as the leading institution, ranked QS World University Ranking 77 (2026) and a member of the prestigious Group of Eight. Its Master of Information Technology, specializing in Applied Computing, Artificial Intelligence, and Software Systems, is accredited by the Australian Computer Society and closely aligns with my academic background and career goals through units such as Machine Learning, Deep Learning, NLP, and Artificial Intelligence. Additionally, Perth offers a comparatively affordable lifestyle, with lower living costs (15–20%) than Sydney or Melbourne, while Bangladesh currently lacks comparable AI-focused specialization, research facilities, and global industry exposure.

3. My BSc in Computer Science and Engineering provided a strong foundation in programming, algorithms, databases, and software engineering principles. I currently work as a Programmer at Computer Ease Limited, where I apply technical knowledge to practical software development tasks. I aim to develop advanced expertise in Artificial Intelligence, as its application across industries is rapidly expanding.

The Master of Information Technology at the University of Western Australia aligns well with my academic background, offering specialisation in Applied Computing, Artificial Intelligence and Software System to further strengthen my technical skills.

Bangladesh's growing ICT sector and the Smart Bangladesh Vision 2041 are increasing demand for skilled AI professionals. Locally, graduates earn around BDT 50,000-80,000 monthly, whereas internationally qualified professionals can earn between BDT 1,20,000-2,50,000, reflecting higher value and opportunities. My long-term goal is to establish an AI-based startup, leveraging my father's business experience and my husband's expertise as a software engineer.

4. I have not previously travelled outside Bangladesh and have no visa history, including any applications, refusals, cancellations, overstays, or breaches of immigration conditions. I have no blood relatives residing in Australia. I also confirm that I have no military or national service obligations, no pending legal issues, and no involvement in civil unrest or activities inconsistent with Australian laws and values. I am applying for the Master of Information Technology at the University of Western Australia as a full-time student with a clear academic purpose. My studies are fully funded by my father (primary sponsor) and my mother-in-law (secondary sponsor), with a combined documented financial capacity of AUD 102,861. I maintain strong personal and economic ties to Bangladesh through my family responsibilities, professional background, and future career prospects. Additionally, my father's company has executed an agreement-based deed allocating a residential flat to me, reinforcing my intention to return.
